## Materials

- For this paper you must have the Oxford International AQA booklet of formulae and statistical tables (enclosed).
- You may use a graphics calculator.

## Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

## Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- Show all necessary working; otherwise marks may be lost.

[The volume of a sphere is given by the formula  $V = \frac{4}{3}\pi r^3$  where  $r$  is the radius.]

Its volume increases at a rate of  $50 \text{ cm}^3$  per second.

Show that, when the volume of the balloon is  $\frac{500\pi}{3}$  cm<sup>3</sup>, the **radius** of the balloon is increasing at a rate of  $\frac{1}{2\pi}$  cm per second.
