# INTERNATIONAL A-LEVEL FURTHER MATHEMATICS

(9665/FM04) Unit FS2 Statistics

Monday 18 January 2021 07:00 GMT Time allowed: 1 hour 30 minutes

#### **Materials**

- For this paper you must have the Oxford International AQA Booklet of Formulae and Statistical Tables (enclosed).
- You may use a graphical calculator.

#### Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

For Examiner's Use

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80

#### **Advice**

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- Show all necessary working; otherwise marks may be lost.

IB/G/Jan21/E8 FM04

### Answer all questions in the spaces provided.

A company believes that use of its revision app changes the chance of a candidate passing a particular mathematics examination.

The results of 200 candidates taking the mathematics examination were collected.

Some of these candidates used the app and others did not.

The table below shows the observed frequencies  $O_i$  from the collected data and the expected frequencies  $E_i$  necessary for a  $\chi^2$  test.

	Pass		Fa	ail
	$O_{i}$	$E_{i}$	$O_{i}$	$E_{i}$
App used	72	66	28	34
App <b>not</b> used	60	66	40	34

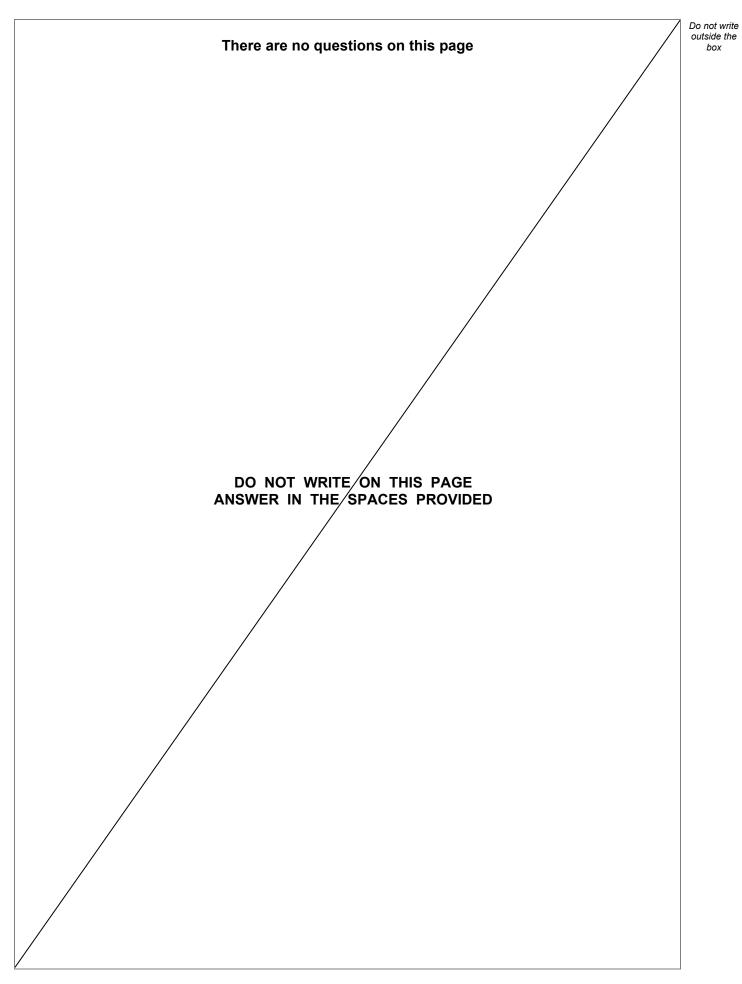

The company conducts a  $\chi^2$  test using a 10% level of significance.

1	(a)	State the hypotheses for this test.  [1 mark]
1	(b)	Show that the value of the test statistic $\chi^2$ is 2.696 correct to four significant figures. [2 marks]

1	(c)	Determine the conclusion that the company should reach based on the results test.	of the	C
			[4 marks]	
				· Γ
		Turn over for the next question		

The random variable $X$ has a normal distribution with population mean $\mu$
A hypothesis test is conducted using a large sample such that $\ \overline{X} \sim N(\mu, 0.0016)$
The hypotheses are
$H_0$ : $\mu = 0.1$
$H_1$ : $\mu > 0.1$
The critical value for $\overline{X}$ in the test is set at 0.16
The population mean is 0.1468
Determine the power of the test, giving your answer to three significant figures.  [3 marks]
Answer

3

3	A die is d	lescribed as fair if	the proba	ability of e	each scoi	re from a	roll of th	e die is t	he same.
	A six-side	ed die is rolled 300	times ar	nd the sc	ore recor	ded for e	ach roll.		
	The resu	Its are shown in the	e table b	elow.					
			I	1			I	T	1
		Score on die	1	2	3	4	5	6	
		Frequency	50	43	38	63	61	45	
									I
3 (a)	Investiga	te whether or not t	he die is	fair at the	e 1% leve	el of sign	ificance.	ı	[8 marks]

the result [2 marks]

4 The random variable X has a distribution with unknown mean  $\mu$  and unknown variance  $\sigma^2$ 

A random sample of size n, denoted by  $X_1, X_2, \dots, X_n$  is used to determine two statistics

$$T = \sum_{k=1}^{n} X_k$$
 and  $V = \left(\frac{1}{n} \sum_{k=1}^{n} X_k^2\right) - \frac{T^2}{n^2}$ 

4 (a) Explain why T and V are both statistics.

[2 marks]

_				
4	(b)	Show that	T	is not an unbiased estimator.

[2 marks]

	Ш
Ш	Ш

4	(c) (i)	Show that $E(X_k^2) = \sigma^2 + \mu^2$	
			[1 mark]
4	(a) (ii)	Observable 4. $\Gamma(T^2) = 0.2 \pm 0.2$	
4	(C) (II)	Show that $E(T^2) = n\sigma^2 + n^2\mu^2$	[O o . o ]
			[2 marks]
		***	
4	(d)	Use your results in <b>part (b)</b> and <b>part (c)</b> to show that $\frac{nV}{n-1}$ is an	
		unbiased estimator of $\sigma^2$	
			[3 marks]

5		10 cans are sampled.	uiaciurei,
		The mass of sugar in each can, $X$ grams, is measured.	
		Assume that the mass of sugar in each can is normally distributed.	
		The summary statistics from the study are	
		$\sum x = 328.2$ and $\sum x^2 = 10843.9$	
5	(a)	Construct a 98% confidence interval for the mean mass of sugar per can. Give your values to two decimal places.	[6 marks]
		Answer	

(b)	The manufacturer must print on the can a value for the population mean amount of sugar per can.
	It is required that this value be found from a sample size greater than 100 cans that ensures the width of the 98% confidence interval is less than 1 gram.
	The population standard deviation is <b>known</b> to be less than 3 grams.
	Find the <b>minimum</b> number of cans in the sample that the manufacturer needs to use.  [4 marks]
	Answer

6		A particular model of a mobile phone has a battery lifetime $X$ hours with mean $\mu$ and variance $\sigma^2$
6	(a)	A random sample of size $n$ of the phones is taken and the mean $\overline{\!X}$ is calculated.
6	(a) (i)	Write down expressions for the mean and variance of $$
		Mean Variance
6	(a) (ii)	Hence show that $\overline{\! X}$ is an unbiased and consistent estimator of $\mu$ [2 marks]
6	(b)	Shop A and shop B both sell this model of mobile phone.
		Shop A surveys a random sample of 40 customers and calculates the mean $\overline{\!X}_{\!A}$ as an estimate of $\mu$
		Shop B surveys a different random sample of 60 customers and calculates the mean $\overline{X}_{\rm B}$ as an estimate of $\mu$
		Show that the relative efficiency of $\overline{X}_B$ with respect to $\overline{X}_A$ is 1.5 [2 marks]

C)	The owners of Shops A and B combine their results in order to improve their estimate of $\mu$	
	They use a new unbiased estimator $T$ of $\mu$ where	
	$T = p\overline{X}_A + (1-p)\overline{X}_B \qquad 0$	
	Find the value of $p$ that minimises the variance of $T$	[4 marl
	Answer
