INTERNATIONAL A-LEVEL FURTHER MATHEMATICS

(9665/FM03) Unit FP2 Pure Mathematics

Thursday 12 January 2023 07:00 GMT Time allowed: 2 hours 30 minutes

Materials

- For this paper you must have the Oxford International AQA Booklet of Formulae and Statistical Tables (enclosed).
- You may use a graphical calculator.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 120.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- Show all necessary working; otherwise marks may be lost.

Do not write outside the box

11		The plane Π_1 has vector equation $\mathbf{r} \cdot \begin{bmatrix} 1 \\ 4 \\ -3 \end{bmatrix} = 5$
		The plane Π_2 has Cartesian equation $x-3y+3z=3$
11	(a) (i)	Write down a vector equation of $\ \Pi_2$ in the form ${\bf r.n}=d$ [1 mark]
		Answer
11	(a) (ii)	Find the acute angle between the planes $~\Pi_{\rm 1}~$ and $~\Pi_{\rm 2}~$ giving your answer to the nearest 0.1° [4 marks]
		Answer

11	(b)	The line of intersection of $~\Pi_{\rm 1}~$ and $~\Pi_{\rm 2}~$ is $~L$	
11	(b) (i)	Find the direction ratios of the line <i>L</i>	2 marks]
		Answer	
11	(b) (ii)	Find Cartesian equations for the line <i>L</i>	3 marks]
		Answer	
11	(c)	The plane Π_3 has Cartesian equation $x + y = 5$	
		Using your answer to part (b)(ii) or otherwise, find the coordinates of the point of intersection of $~\Pi_1$, $~\Pi_2$ and $~\Pi_3$	f
			2 marks]
		Answer	

14	(a)	For real constants m and n given that, in exponential form
		$m+\mathrm{i}n=r\mathrm{e}^{\mathrm{i} heta}$ and $-n+\mathrm{i}m=r\mathrm{e}^{\mathrm{i}\phi}$
		express ϕ in terms of θ and π [2 marks]
		$\phi = $
12	(b)	In the Argand diagram opposite, the points P , Q and R represent the roots of the equation $z^3 = a + \mathrm{i} b$
		where a and b are real constants.
12	(b) (i)	Find, in terms of a and b , the radius of the circle on which $P,$ Q and R lie. [2 marks]
		Answer

12 (b) (ii) On the Argand diagram below, mark and label the approximate position of the point T which represents the root of the equation

$$z^3 = -b + ia$$

that is closest to the point P

[1 mark]

12 (c) In the case where

and
$$b = a\sqrt{3}$$
 where $a > 0$

find, in exponential form, the complex number which represents the midpoint of the ${f chord}$ ${\it TP}$

[6 marks]

10

Do not write outside the box

14 (a)	By applying de Moivre's theorem to $(\cos \theta + i \sin \theta)^4$, express $\cos 4\theta$ in terms of $\sin \theta$
	[4 marks]
	Answer
14 (b)	Hence, show that the equation $\cos 4\theta = \cos \left(\frac{\pi}{2} - 3\theta\right)$ can be written in the form
	$8\sin^4\theta + 4\sin^3\theta + a\sin^2\theta + b\sin\theta + c = 0$
	where a , b and c are integers.
	[4 marks]

		Hence, prove that
[5 marks]	$\sin\left(\frac{\pi}{14}\right) + \sin\left(\frac{5\pi}{14}\right) = \frac{1}{2} + \sin\left(\frac{3\pi}{14}\right)$
